CRC Press

CRC Press is a premier global publisher of scientific, technical, and medical content for academics, professionals and students. Our products include world-class references, handbooks, and textbooks as well as the award-winning CRCnetBASE eBook collections.

eBooks

eBooks are available for individual purchase on the CRC Press website and can be delivered directly to your computer or eReader. Visit www.crcpress.com to browse and purchase.

Libraries And Institutions

Subscribe to or purchase a wide range of CRCnetBASE eBook subject collections, or customize your collection from our entire catalog. FREE trials and library resources are available.

For more information, visit www.CRCnetBASE.com or contact your local sales agent.

eUpdates

Register your email at www.crcpress.com/email to receive information on new books as they publish in your area of interest and for exclusive access to email discounts.

Partnership Opportunities

We are continually seeking innovative ways to support and collaborate with the global scientific communities for which we publish.

If you or your organization would like to discuss partnership opportunities, email specialsales@taylorandfrancis.com.

Considering Books for Course Use?

Complimentary inspection copies are available for qualified lecturers considering a textbook for course adoption. To obtain copies of any textbook, visit www.crctextbooks.com and select 'Request Your Inspection Copy' on any textbook page.

Cognitive Psychology

A Student's Handbook

Michael W. Eysenck, Royal Holloway, University of London, UK and Mark T. Keane, University College Dublin, Ireland

The fully updated eighth edition of *Cognitive Psychology: A Student's Handbook* provides comprehensive yet accessible coverage of all the key areas in the field ranging from visual perception and attention, through to memory and language. Each chapter is complete with key definitions, practical real-life applications, chapter summaries and suggested further reading to help students develop an understanding of this fascinating but complex field.

Cognitive Psychology

The Basics

Sandie Taylor, University of South Wales, UK and Lance Workman

Series: *The Basics*

Cognitive Psychology: The Basics provides a compact introduction to the core topics in the field, discussing the science behind the everyday cognitive phenomena experienced by us all. The book considers laboratory and applied theory and research alongside technological developments to demonstrate how our understanding of the brain's role in cognition is improving all the time.

It is an essential introductory text suitable for all students of Cognitive Psychology and related disciplines. It will also be an ideal read for any reader interested in the role of the brain in human behavior.

4th Edition · TEXTBOOK

An Introduction to Cognitive Psychology

Processes and Disorders

David Groome, (retd.) University of Westminster, London.

The new edition provides a comprehensive, yet accessible, overview of the field for undergraduate students. The fourth edition has been thoroughly revised throughout to provide a comprehensive introduction to the core topics of cognition, including memory, perception, thinking, and language. Uniquely, alongside coverage of normal cognitive function, the book also includes chapters on clinical disorders such as agnosia, amnesia, and aphasia, providing a more balanced insight into the nature of cognition and its related disorders. This book will appeal to all students on an undergraduate psychology degree course, as well as to those studying in related clinical professions.

Fundamentals of Cognitive Science

Minds, Brain, Magic, and Evolution

Thomas Hardy Leahey

Fundamentals of Cognitive Science draws on research from psychology, philosophy, artificial intelligence, linguistics, evolution, and neuroscience to provide an engaging and student-friendly introduction to this interdisciplinary field. Whilst structured around traditional cognitive psychology topics, the book also looks at cognitive neuroscience, embodied cognition, and magic to illustrate cognitive science principles. Using extended case studies to address the most important themes, this book is suitable for upper level undergraduate and graduate courses in psychology and related fields. Please visit www.fundamentalsofcognitivescience.com for further resources.

The Student's Guide to Cognitive Neuroscience

Jamie Ward, University of Sussex, UK

Reflecting recent changes in the way cognition and the brain are studied, this thoroughly updated fourth edition of this bestselling textbook provides a comprehensive and student-friendly guide to cognitive neuroscience. This book will be invaluable as a core text for undergraduate modules in cognitive neuroscience and can also be used as a key text on courses in cognition, cognitive neuropsychology, biopsychology or brain and behavior. New material for this edition includes more on the impact of genetics on cognition and new coverage of the cutting-edge field of connectomics. Student-friendly pedagogy is included in every chapter, alongside an extensive companion website.

3rd Edition

Cognitive Illusions

Intriguing Phenomena in Thinking, Judgment, and Memory

Edited by **Rüdiger F Pohl**, University of Mannheim, Germany
Cognitive Illusions explores a wide range of fascinating psychological effects in the way we think, judge and remember in our everyday lives. In this volume, Rüdiger F. Pohl brings together leading international researchers to define what cognitive illusions are and discuss their theoretical status: are such illusions proof of a faulty human information-processing system, or do they only represent by-products of otherwise adaptive cognitive mechanisms? Demonstrating just how diverse cognitive illusions can be, it is a must read for all students and researchers of cognitive illusions, specifically, those focusing on thinking, reasoning, decision-making and memory.

Incubation in Problem Solving and Creativity

Unconscious Processes

Kenneth J. Gilhooly

Incubation is an integral part of the creative problem solving process. Presenting the main issues, findings and implications of cognitive research on incubation effects in problem solving and creativity, this book argues that unconscious work is automatic. The book explores the underlying processes involved in incubation, and their key role in selecting promising solutions. The book concludes with a discussion of future implications of unconscious work theory for enhanced problem solving by humans and artificial intelligence systems, positioning incubation as an effective and important stage in creative problem solving.

International Handbook of Thinking and Reasoning

Edited by **Linden J. Ball**, University of Central Lancashire, UK and **Valerie A. Thompson**, University of Saskatchewan, Canada

Series: Routledge International Handbooks

The *International Handbook of Thinking and Reasoning* brings together some of the world's leading experts in decision sciences in a single comprehensive and authoritative volume. The book considers current thinking and reasoning research, both in relation to empirical evidence and theoretical analyses. Emerging trends and cutting-edge debates in the field are positioned in relation to established findings and theories, giving a clear sense of the way in which new ideas are challenging traditional

viewpoints. The handbook is essential reading for all researchers of Thinking, Reasoning, and Decision Sciences.

The Art and Science of Making Up Your Mind

Rex V. Brown, Decision Sciences Consortium, Virginia, **Jonathan Baron** and **Karen Brown**

Combining multiple evaluations of the same judgment ('hybrid judgment') and exploring innovative analytical concepts (such as 'ideal judgment'), this book explores and analyses the skills needed to master the basics of non-mathematical decision making, and what should be done using real world illustrations of decision methods. The book is an ideal companion for students of Thinking, Reasoning, and Decision-Making, and also for anyone wanting to understand how to make better judgements in their everyday lives.

Insight and Creativity in Problem Solving

Edited by **Kenneth J. Gilhooly**, University of Hertfordshire, UK, **Linden J. Ball**, University of Central Lancashire, UK and **Laura Macchi**, University of Milano-Bicocca, Italy

Series: Current Issues in Thinking and Reasoning

There has been an upsurge of research aimed at removing the mystery surrounding insight and creative thinking processes in problem solving. Chapters in this volume converge on a nuanced 'dual-process' view of insight and creative thinking. It was originally published as a special issue of *Thinking and Reasoning*.

Human Thinking

S. Ian Robertson

Series: The Basics

Written in a jargon-free and accessible style, *Human Thinking: The Basics* critically examines the fundamental principals of human thought. Discussing topics such as how our thinking has evolved over time and how it changes from childhood to adulthood, the book considers a range of phenomena that are not related simply to biases and rationality. The book covers the evolution and development of human thinking, the cognitive underpinnings, dual processing theory, unconscious motivations and the role of the environment. Featuring real world examples of the current and past political and social world, the book will be essential reading for all students of thinking and reasoning.

The Life, Times and Work of Peter Wason, Pioneering Psychologist

Ken Manktelow, University of Wolverhampton, UK

This book tells the story of Peter Cathcart Wason, the pioneering research psychologist credited for establishing a whole new field of science: the psychological study of reasoning. The author, Ken Manktelow, paints a vivid and personal portrait of Wason. Covering not only his academic work, the book traces his eclectic family history, before moving through his service in the Second World War, to his abortive first attempt at a career and subsequent extraordinary success as a psychologist. A unique cartography of one of the most renowned figures in cognitive psychology, this will be of interest to anyone with an interest in thinking and reasoning, as well as cognitive psychology as a whole.

The Psychology of Intelligence

Sonja Falck

Series: The Psychology of Everything

What fascinates us about intelligence? How do attitudes to intelligence shape a society? Can we overcome our fears and prejudices about intelligence? Sonja Falck shows there have been two main eras in Western society's way of engaging with the phenomenon of intelligence, and that we are on the brink of a third. She explains the psychology that underlies the contradictory psychosocial reactions and interventions surrounding intelligence seen over the decades alongside ongoing neurobiological studies of intelligence. Her thought-provoking analysis challenges popular assumptions and is applied to show how we can benefit from embracing

intelligence in ourselves and others as a fact of life.

Edited by Daniel Spieler, Georgia Tech, USA and Eric Schumacher, Georgia Institute of Technology, Atlanta, USA
Series: Frontiers of Cognitive Psychology

This volume provides an overview of cutting-edge methods currently being used in cognitive psychology. These theoretical insights and methodological innovations are not as widely represented within the cognitive psychological literature as more traditional methods, but they are likely to appear with increasing frequency in coming years. As such, it is not a typical research methods volume that covers familiar ground, but it is in some ways speculative and also instructive to psychologists unfamiliar with the new methods.

Why Reason Matters

Edited by Gordon Pennycook, Yale University, USA

Series: Current Issues in Thinking and Reasoning

This volume presents detailed reviews and will be of use to anyone interested in the strengths and weaknesses of human reason. This volume will also be of use to both proponents and skeptics of dual-process theory as it represents a strong case for the wide theoretical significance of the distinction between intuition and reflection. The empirical evidence indicates that analytic thinking plays a significant role in everyday life. Reason does, in fact, matter.

Thinking, Reasoning, and Decision Making in Autism

Edited by **Kinga Morsanyi** and **Ruth M.J. Byrne**

Series: Current Issues in Thinking and Reasoning

Thinking, Reasoning and Decision Making in Autism is the first collection to provide insight into the cognitive processes that underlie typical characteristics of autism. Focusing on research with high-functioning adolescents and adults, the book considers the long-term consequences of these characteristics, providing in-depth analyses of particular areas of cognitive functioning. Featuring contributions from world-leading researchers from the fields of cognitive psychology and autism, this volume will be essential reading for postgraduate students and researchers, as well as those working with individuals with autism spectrum disorders.

4th Edition · TEXTBOOK

Human Memory

Gabriel A. Radvansky, University of Notre Dame, USA
Divided into three clear sections, this book provides an accessible introduction to the latest theory and theory on human memory. Beginning with coverage of the history of memory, the first section also introduces basic neuroscience and methodology. Core topics are then discussed, including sensory registers, mechanisms of forgetting, and short-term/working, nondeclarative, episodic, and semantic memory. The book concludes by looking at advanced topics in memory, such as formal models of memory, memory for space and time, autobiographical memory, memory and reality, and more. Full of student-friendly pedagogy, the book is an essential guide for

all students of human memory.

Current Issues in Memory

Memory Research in the Public Interest

Edited by **Jan Rummel**

Series: Current Issues in Memory

This comprehensive collection provides an essential overview on the state of the art in areas of current and emerging interest in the psychological study of memory. Gathering together some of the most influential chapters from the series into one volume for the first time, featuring many of the leading thinkers on topics from working memory to false fabrication and autobiographical forgetting, the text showcases the best of memory research in the public sphere. With an introduction and conclusion by Professor Jan Rummel, this is the ideal companion for any student or practitioner looking for an insightful overview of the most researched topics in the field.

Memory Quirks

The Study of Odd Phenomena in Memory

Edited by **Anne M. Cleary** and **Bennett L. Schwartz**

Memory Quirks explores the variety of memory phenomena that confound and challenge standard theories of memory processing. While traditional memory research focused on encoding and retrieval, recognition and recall, and semantic memory and episodic memory, there are a myriad of memory phenomena that do not fit into these neat categories. Featuring contributions from leading international researchers, on topics including déjà vu, tip-of-the-tongue states, and stolen memory, the book reviews the research and considers why these memory quirks are important to understanding human memory as a whole. It is essential reading for all students and researchers of

human memory.

Autobiographical Memory Development

Theoretical and Methodological Approaches

Edited by **Sami Gülgöz** and **Basak Sahin-Acar***Series: Current Issues in Memory*

Bringing together leading researchers from across the globe, *Autobiographical Memory Development* presents an overview of different theoretical perspectives in the field. The book adopts a multidisciplinary approach, discussing the emergence of autobiographical memories and the development of abilities to encode events before considering different patterns of AM emergence and development as they relate to cultural, social, linguistic, and family contexts. It will also devote coverage to methodological problems when children's memories, and present novel future strategies. It will be an essential read for all researchers of Autobiographical Memory.

The Development of Memory in Infancy and Childhood

Edited by **Mary L. Courage**, Memorial University of Newfoundland, Canada and **Nelson Cowan**, University of Missouri

This fully updated volume expands on the previous edition and offers new research on significant themes and ideas that have emerged in the past decade such as the cognitive neuroscience of memory development, autobiographical memory and infantile amnesia, and the cognitive and social factors that underlie memory for events. Including new topics such as spatial representation and spatial working, prospective memory, false memories, and memory and culture, this volume will appeal to senior undergraduate and graduate students of developmental and cognitive psychology, as well as to developmental

psychologists who want a compendium of key topics in memory development.

Prospective Memory

Edited by **Jan Rummel** and **Mark A. McDaniel**, University of New Mexico*Series: Current Issues in Memory*

Featuring contributions from world-leading experts, *Prospective Memory* presents a timely overview of current theoretical, methodological, and applied issues in the field. The volume integrates our understanding of prospective memory and how it functions with related cognitive processes and themes, such as context memory, metamemory, working memory, and cognitive control. Considering recent methodological advances in the field, such as the use of cognitive modelling, the book will also cover individual differences in prospective memory abilities, their development across the life span, and their manifestations in naturalistic settings.

Cognitive Neuroscience of Language

David Kemmerer, Purdue University, USA

This text provides an up-to-date, wide-ranging, and pedagogically practical survey of the neural underpinnings of language. It guides students through all of the major areas of investigation, beginning with the fundamental aspects of brain structure and function and then following with key topics such as aphasia, the perception and production of speech, the meaning of words, morphology, syntax, discourse, reading and writing, sign language, and the bilingual brain. This edition has been thoroughly updated throughout, and now includes a dedicated chapter on the neural substrates of bilingualism.

The Bilingual Advantage in Executive Functioning Hypothesis

How the debate provides insight into psychology's replication crisis

Kenneth Paap

This ground-breaking book explores one of the liveliest debates in bilingualism and cognitive psychology. It examines the hypothesis that using two languages leads to the enhancement of domain-general executive functioning (EF) and argues that either the bilingual advantage does not exist or is restricted to very specific circumstances. This is essential reading for students and scholars in bilingualism, psychology, linguistics, languages, speech and hearing science and related fields. It also serves as an excellent primary source for graduate courses on the bilingual advantage debate, and is useful for advanced undergraduate courses in psycholinguistics, cognition or bilingualism.

4th Edition · TEXTBOOK

The Psychology of Language

From Data to Theory

Edited by **Trevor A. Harley**, University of Dundee, UK

"I want this book for me, not just for my students. For the student, it's a thorough, but lively, introduction to language use in a wider context. For me, it's a valuable reminder of psycholinguistics's evolution from its concerns with the psychological reality of grammar, to its current spot at the center of modern cognitive neuroscience." - Gary S. Dell, University of Illinois at Urbana-Champaign

This revised edition of the popular textbook provides a comprehensive introduction to the psychology of language for undergraduates, postgraduates, and researchers. It contains

everything the student needs to know about how we acquire, understand, produce, and store language.

Bilingualism Across the Lifespan

Opportunities and Challenges for Cognitive Research in a Global Society

Edited by **Wendy S. Francis**, University of Texas at El Paso, USA

Series: *Frontiers of Cognitive Psychology*

This book explores the opportunities and challenges that are inherent in conducting cognitive research in an increasingly global and multilingual society. It illustrates how researchers of bilingualism leverage theory, methodology, and findings from single-language research, incorporate uniquely bilingual processes, and target populations of bilinguals that help to establish universal properties. Bringing together leading international contributors, the book provides the reader with a better understanding of the nature of bilingualism as it relates to human cognition and is an essential read for all researchers and upper level students of bilingualism and cognitive psychology.

Visual Word Recognition Volume 1

Models and Methods, Orthography and Phonology

Edited by **James S. Adelman**, University of Warwick, Coventry, UK

Series: Current Issues in the Psychology of Language

This first volume outlines established theory, new models, and key experimental evidence used to investigate visual word recognition: lexical decision and word naming. It also considers methodological concerns: new developments in large databases, and how these have been applied to theoretical questions; and control considerations when dealing with words as stimuli.

Finally, the book considers the visual-orthographic input to the word recognition system: from the left and right-hand sides of vision, through the processing of letters and their proximity, to the similarity and confusability of words, and the contribution of the spoken-phonological form of the word.

Visual Word Recognition Volume 2

Meaning and Context, Individuals and Development

Edited by **James S Adelman**, University of Warwick, Coventry, UK

Series: Current Issues in the Psychology of Language

This second volume examines how research on word recognition has been linked to the study of concepts and meaning, such as how morphemes affect word recognition, how the meaning of words affects their processing, and the effect of priming on the processing of words. The book also discusses eye-movement research, the reading of whole sentences and passages, how bilinguals recognize words in different languages, individual differences in visual word recognition, and the development of visual word recognition difficulties in developmental dyslexia.

Consciousness

An Introduction

Susan Blackmore and Emily T. Troscianko, University of Oxford, UK

Is there a theory that explains the essence of consciousness? Or is consciousness itself just an illusion? The 'last great mystery of science', consciousness is an area of cognitive psychology that was once viewed with extreme scepticism and was consequently avoided by the majority of mainstream scientific researchers. However, it has now become a significant area of research despite the complexity of the subject matter. *Consciousness: An Introduction* provides a comprehensive introduction to the study of this complex field. The book draws on theories and examples

from psychology, neuroscience, philosophy, and biology to provide students with a thorough understanding of this subject

Dark Cognition

Evidence for Psi and its Implications for Consciousness

David Vernon, Canterbury Christchurch University, UK

The book provides an engaging introduction to the field of parapsychology, uniquely situating it within a discussion of the nature of science and the scientific paradigm. It explores the history of paranormal experiences, considering assessment methodology, empirical evidence, and existing theories attempting to explain such experiences. Drawing on findings from psychokinesis, telepathy and energy healing, the book discusses whether these are distinct aspects of cognition or representative of the ways researchers examine such effects. The book concludes with a reflection on the fields of dark cognition, exploring the implications of such findings for human

consciousness.

Edited by Morten Overgaard, Aarhus University, Denmark, Jesper Mogensen and Asger Kirkeby-Hinrup

Series: *Current Issues in Consciousness Research*

Beyond Neural Correlates of Consciousness seeks to establish a connection between neural correlates of consciousness and a theoretical interpretation. Over the last 50 years, great developments have been made in the search for neural correlates of consciousness, but to date, few attempts have been made to understand or interpret these correlations. This ground-breaking volume draws on the expertise of leading international academics to provide an overview of the latest research, whilst also reviewing the methodology and discussing the theoretical assumptions behind each NCC and their consequences.

Transitions Between Consciousness and Unconsciousness

Edited by **Guido Hesselmann**

Series: Current Issues in Consciousness Research

Rigorous experimental research over the last two decades has produced a rich body of data acquired in the aim to better understand consciousness and its neural underpinnings. This volume aims to synthesise this data, placing a strong empirical focus on the transitions between conscious and unconscious models of visual processing. Bringing together leading academics and rising stars in the field, the book discusses controversial topics and ideas, and will act as a catalyst for scientific debate. It is an essential volume for consciousness researchers from across psychology and philosophy.

Thinking Visually

Stephen K. Reed

This book documents the many ways pictures, visual images, and spatial metaphors influence our thinking. The book discusses recent empirical, theoretical, and applied contributions that support the view that visual thinking occurs not only where we expect to find it, but also where we do not. Much of comprehending language, for instance, depends on visual simulations of words or on spatial metaphors that provide a foundation for conceptual understanding. It will be an essential read for all students and researchers interested in Visual Thinking.

Foundations of Geometric Cognition

Mateusz Hohol

Foundations of Geometric Cognition presents an empirically inspired theory of geometric cognition. The book explains how language and diagrams provide cognitive scaffolding for abstract geometric thinking within a context of Euclidean systems of thought. Hohol argues that geometric cognition is founded on our basic spatial abilities and requires interactions between concrete spatial representations and abstract linguistic ones. Drawing on research from diverse fields including psychology, cognitive science, and mathematics, this book is a must-read for anyone interested in the burgeoning field of geometric cognition.

The Perception of Time

Your Questions Answered

Simon Grondin

The Perception of Time provides an insight into how individuals experience the passing of time. Adopting a unique question and answer format, Simon Grondin provides a contemporary overview of the temporal mind. Beginning with coverage of basic temporal processes, the book then goes on to explore how people with cognitive, neurological or psychiatric problems may experience time differently. The book concludes with a discussion of everyday experiences of time, and how our age, emotion and sex can all impact our perception of time. It will be an essential read for all students and researchers of time perception from psychology, neuroscience and philosophy backgrounds.

AI vs Humans

Michael W. Eysenck, Emeritus Professor of Psychology in the psychology department at Royal Holloway University of London, UK and **Christine Eysenck**

The great majority of books on artificial intelligence are written by AI experts who understandably focus on its achievements and potential transformative effects on society. In contrast, *AI vs. Humans* is written by two psychologists (Michael and Christine Eysenck) whose perspective on AI (including robotics) is based on their knowledge and understanding of human cognition. At a time when human commitment to AI appears unstoppable, this up-to-date book advocates a symbiotic and co-operative relationship between humans and AI. It will be essential reading for anyone interested in AI and human cognition.

Network Science in Cognitive Psychology

Edited by **Michael S. Vitevitch**, University of Kansas, USA
Series: Frontiers of Cognitive Psychology

This volume provides an integrative review of the emerging and increasing use of network science techniques in cognitive psychology, that were first developed in mathematics, computer science, and physics. It draws on the three traditional pillars of cognitive psychological research – experimental, computational, and neuroscientific – and incorporates the latest findings from neuroimaging. The resulting network perspective is then applied to the major domains of memory, language, and decision-making, and more contemporary topics such as emotion, social cognition, and comparative psychology. The techniques outlined provide a rich resource for upper-level

students and researchers.

Cognitive Design for Artificial Minds

Antonio Lieto

Cognitive Design for Artificial Minds explains the crucial role that human cognition research plays in the design and realization of artificial intelligence systems, illustrating the steps necessary for the design of artificial models of cognition. It bridges the gap between the theoretical, experimental and technological issues addressed in the context of AI of cognitive inspiration and computational cognitive science. Providing a comprehensive overview of cognitive design principles in constructing artificial minds, this text will be essential reading for students and researchers of artificial intelligence and cognitive science.

Designing Robots, Designing Humans

Edited by **Cathrine Hasse**, Aarhus University, Denmark and **Dorte Marie Søndergaard**

Designing Robots, Designing Humans brings together a group of international researchers to explore the different ways that robots and humans engage with one another, offering a new and innovative opportunity for understanding our future with robots. Robot design is advancing at an incredible pace, and consequently the role of robots has expanded beyond mechanical work in the industrial sector to the social environment, interacting with children and adults.

TEXTBOOK · READER

Emotion and Cognition

An Introduction

Patrick Lemaire, CNRS & Aix-Marseille Université, France

This book provides a complete and integrated assessment of the role of emotions in a wide variety of cognitive functions. Including both empirical and theoretical works and debates, this book presents the results of research aimed at understanding how our emotions influence cognitive performance in as diverse areas as attention, memory, judgment, decision-making or reasoning, and emotional regulation.

Emotion and Cognition is a valuable source for all undergraduate and graduate students in the disciplines of cognitive and affective sciences, as well as for experts in the field.

Healing the Reason-Emotion Split

Scarecrows, Tin Woodmen, and the Wizard

Daniel S. Levine, University of Texas at Arlington, USA

Healing the Reason-Emotion Split draws on research from experimental psychology and neuroscience to dispel the myth that there is a fundamental opposition between reason and emotion. Arguing that reason and emotion mutually benefit our decision-making abilities, the book explores the idea that understanding this relationship could have long-term advantages for our management of societies biggest problems. Levine contends that we should change how we conceive our relationships with each other and the earth, using our emotions and innate reasoning abilities to aid mental processing and prove that individuals and societies can be empathic and practical at the same time.

Psychology, Art and Creativity

Shannon Whitten

This comprehensive text challenges the taken-for-granted opposition of science and art by combining the fundamental principles of Psychology, Art and Creativity, and presenting the interdependent disciplines together in one unique, clear and accessible resource. Emphasizing the link between creativity and good mental health, the book is an essential read for students of the Psychology of Art, Creativity, Art Therapy, and Empirical Aesthetics, as well as any discipline within humanities, arts and science. It will also be of relevance to anyone interested in understanding the psychology behind creativity and its therapeutic effects on the artist.

STUDENT REFERENCE

The Psychology of Art

George Mather, University of Lincoln, UK

Series: The Psychology of Everything

How do we define art? Why do we want to create artistic works? How does the brain inform aesthetic judgement? The Psychology of Art provides an eclectic introduction to the myriad ways that psychology can enrich our understanding and appreciation of art. The book draws on scientific approaches to the study of human sensation and perception, bridging the gap between psychology and traditional approaches to art taken in the humanities. With art as a constant source of inspiration, conflict, and conversation, The Psychology of Art introduces the reader to new ways of thinking about why and how we create and consume art.

Edited by Martin Skov and Marcos Nadal

Series: Routledge International Handbooks

The Routledge International Handbook of Neuroaesthetics is an authoritative reference work that provides the reader with a wide-ranging introduction to this scientific discipline. The book brings together leading international academics to offer a well-balanced overview of this burgeoning field while addressing two central questions; how the brain computes aesthetic appreciation for sensory objects, and how is art created and experienced. It is a compelling read for anyone interested in making a first venture into this exciting new area of study and

is best suited for students and researchers in the field of Neuroaesthetics, Perceptual Learning and Cognitive Psychology.

Studies in the Psychology of Art

Alberto Argenton and Ian Verstegen, Independent Scholar, USA

Series: Studies and Research in the Psychology of Art

The studies and research presented in *Art and Expression* analyse the cognitive processes involved in artistic production and in aesthetic reception, understanding and enjoyment. The book develops a phenomenological approach through the observation of multiple "artistic objects" spanning the whole arc of the history of western graphic and pictorial art. It analyses the relative representational strategies of a dynamic and expressive character, one that can be reduced to basic aspects of perception, like obliqueness, amodal completion, and the bilateral function of contour, giving new directions relative to

the functioning of cognitive activity.

Introduction to Ecological Psychology

A Lawful Approach to Perceiving, Acting, and Cognizing

Julia J. C. Blau, Central Connecticut State University and **Jeffrey B. Wagman**, Illinois State University, USA
 Series: *Resources for Ecological Psychology Series*

Introduction to Ecological Psychology is a highly accessible book that offers an overview of the fundamental theoretical foundations of Ecological Psychology. The authors, Julia Blau and Jeffrey Wagman, provide a broad coverage of the topic, including discussion of perception-action as well as development, cognition, social interaction, and application to real world problems.

This book is an essential guide to the basics for students and professionals in Ecological Psychology, Sensation and Perception,

Cognition, and Development. It is also indispensable reading for anyone interested in Ecological and Developmental Studies.

Intellectual Journeys in Ecological Psychology

Interviews and Reflections from Pioneers in the Field

Edited by **Agnes Szokolszky**, Rutgers University and Psychology Department, Ithaca College and **Zsolt Palatinus**, University of Szeged, Department of Psychology, Hungary
 Series: *Resources for Ecological Psychology Series*

Intellectual Journeys in Ecological Psychology presents twelve in-depth interviews with prominent scientists associated with Ecological Psychology, rooted in James Gibson's radical approach to perception. Featuring a mix of interviews conducted around the turn of the millennium, the book reveals discussions not previous found in publications and authentic perspectives about the early days of Ecological Psychology.

This book will be beneficial to all researchers and students in the international community of Ecological Psychology. It will also serve as a starting point for those who wish to learn more about the movement and origins of Ecological Psychology.

Perception as Information Detection

Reflections on Gibson's Ecological Approach to Visual Perception

Edited by **Jeffrey B. Wagman**, Illinois State University, USA and **Julia J. C. Blau**, Central Connecticut State University
 Series: *Resources for Ecological Psychology Series*

This text provides a chapter-by-chapter update of the landmark volume by J.J. Gibson on the *Ecological Approach to Visual Perception* (1979). Each chapter expands on the key concepts of the original volume, bridging the decades with all the major developments in the field to date. The contributors are all internationally renowned scholars whose careers were influenced by the book. Providing a new generation of students with a contemporary overview, this volume may be used as a

supplement or main text to a range of courses in sensation and perception, vision, cognitive science, ecological psychology, and philosophy of mind.

Affective Gibsonian Psychology

Rob Withagen

Series: *Resources for Ecological Psychology Series*

Affective Gibsonian Psychology presents the first comprehensive ecological approach to our affective engagement with the environment, drawing on James Gibson's new foundation of psychology.

This book is intended to contribute to the ecological movement in psychology and is of interest to scholars working in the fields of Gibsonian psychology, affective science, phenomenology, clinical psychology, and (radical) embodied cognitive science.

Behavior and Culture in One Dimension

Sequences, Affordances, and the Evolution of Complexity

Dennis P. Waters

Series: *Resources for Ecological Psychology Series*

This book provides an essential and readable introduction into how one-dimensional sequences (DNA, syntax, code) organise complex physical and living systems. Integrating ecological psychology with a wide variety of disciplines from astrobiology to linguistics, the book builds on Gibsonian concepts of perception, action, and affordances, as well as the works of Howard Pattee, to examine linear sequences, and the ways in which they interact with the non-linear, three-dimensional world. Also exploring how language helps organise behaviour and structures, this is fascinating reading for students and researchers in ecological psychology, linguistics, and the social and biological

sciences.

A Meaning Processing Approach to Cognition

What Matters?

John Flach and **Fred Voorhorst**

Series: *Resources for Ecological Psychology Series*

In *What Matters*, a Cognitive Psychologist and an Industrial Design Engineer draw on their own experiences of trying to make technology work whilst reflecting the foundations of Cognitive Science and Product Design. This book aims to address the gap between controlled laboratory experiments and real-world experience by questioning the metaphysical foundations of cognitive science and suggesting alternative directions to provide better insights for design. An essential read for all students of Ecological Psychology or Cognitive Systems Design, this book takes the reader on a journey beyond the conventional dichotomy of mind and matter to explore a world of 'what matters'.
